

Enhanced Life Extension Protein (Natural)

1000 grams (2.2 lbs)

Item Catalog Number: 01094

Scientists have begun to investigate the ability of certain biological components of whey protein to enhance immunity. Those include: lactoferrin, beta-lactoglobulin, alpha-lactalbumin, glycomacropeptide, and immunoglobulins. Years of scientific research have resulted in the development of a specially designed whey protein that can boost immune function, protect against free radical attack, and maintain lean muscle mass.^{21, 31-41}

Life Extension® offers whey protein powders in four flavors that contain added lactoferrin. Life Extension uses a production method that produces a high quality whey protein isolate. Using a low temperature microfiltration technique, it is possible to produce a 98% undenatured whey protein isolate that acts as a powerful immune stimulant and retains all the important sub-fractions, such as lactoferrin, a strong antioxidant with immune-stimulating properties.²¹⁻²³
