

Regimint™

60 enteric-coated tablets

Item Catalog Number: 00605

The gastrointestinal tract is a long muscular tube that functions as the food processor for the human body. The digestive system includes the following organs: the mouth and salivary glands, stomach, the small and large intestines, colon, liver, pancreas, and the gall bladder. The gastrointestinal tract is not a passive system; rather, it has the capability to sense and react to the materials that are passed through it. For a healthy digestive system, every person requires different food selections that match their gastrointestinal tract capacity.

Regimint™ is an enteric-coated peppermint and caraway oil combination that has been used as a successful digestive aid.^{137,138,144} This combination acts locally to relax the smooth muscle of the intestines and has a calming effect on the digestive system.^{137-148*} The enteric coating allows the oil to bypass digestion in the stomach where the acid environment would otherwise destroy the active ingredient. Regimint™, through its mode of action, supports gastrointestinal tract function and motility.^{143,145,146,147*}
